

# **COMPARISON OF TREATMENT OPTIONS FOR OVERACTIVE BLADDER (OAB)**

## Information from The British Association of Urological Surgeons (BAUS)

You have been given this leaflet because you have an overactive bladder. The aim of the leaflet is to provide you with information about the different treatment options available and how they compare with one another.

We have consulted specialist surgeons during its preparation, so that it represents best practice in UK urology. You should use it in addition to any advice already given to you.

To view the online version of this leaflet, type the text below into your web browser:

http://www.baus.org.uk/\_userfiles/pages/files/Patients/Leaflets/OAB options.pdf

Caffeine reduction, pelvic floor exercises, bladder training		
Type of treatment	Conservative, lifestyle	
Success rate	Greater than 50%	
Complications	None	
Advantages	Simple, safe and effective for many patients	
Disadvantages	Requires commitment by the patient	

Vaginal oestrogen		
Type of treatment	Cream or pessary	
Success rate	Not accurately known, but approximately 50%	
Complications	May cause vaginal irritation	
Advantages	Safe and effective	
Disadvantages	Only suitable for post-menopausal women May not be suitable in women who have had breast cancer

#### **Anticholinergic tablets**

(e.g. Oxybutynin, Tolterodine, Trospium, Solifenacin)

**Type of treatment** Tablets

**Success rate** 60% of patients will continue treatment

**Complications** Dry mouth (20%) and constipation (10%)

**Advantages** Can work well and avoids more invasive treatments

**Disadvantages** May cause side-effects

Concerns about possible increased risk of dementia

### Beta-3 agonist tablets (e.g. Mirabegron)

**Type of treatment** | Tablets

**Success rate** 60% of patients will continue treatment

**Complications** High blood pressure, abnormal heart rhythms and

stomach pain/nausea (10% for each)

**Advantages** Very effective

Avoids most of the side-effects of anticholinergics No current concerns about the risk of dementia

**Disadvantages** Cannot be used with severe high blood pressure or

certain heart problems ("prolonged QT" interval)

## Botox injections into the bladder wall

**Type of treatment** Minimally-invasive day-case procedure, usually

performed under local anaesthetic

**Success rate** 80% report improvement

**Complications** Urinary infection (20%), difficulty passing urine

with poor bladder emptying (10% require clean

intermittent self-catheterisation, CIC)

**Advantages** Very effective

Local anaesthetic procedure

**Disadvantages** Requires repeat injections every six months

10% risk of CIC

Sacral neuromodulation		
Type of treatment	Minimally-invasive needing two separate procedures, usually under general or spinal anaesthetic	
Success rate	70% of patients report improvement	
Complications	Infection of the implanted stimulator (very rare)	
Advantages	Minimally-invasive and safe, with good efficacy	
Disadvantages	Requires two separate procedures Patients unable to go in MRI scanner afterwards	

Augmentation enterocystoplasty		
Type of treatment	Major operation with several days in hospital	
Success rate	70% of patients report improvement	
Complications	70% risk of needing CIC, mucus plugs in the urine and repeated infections	
Advantages	May be successful where other treatments have failed	
Disadvantages	Major surgery with significant long-term side-effects and a risk of CIC	

Ileal conduit urinary diversion		
Type of treatment	Major operation with several days in hospital	
Success rate	100% resolution of incontinence	
Complications	Urine infections, poor kidney drainage and the need for a stoma (bag)	
Advantages	Last resort for severe, untreatable incontinence	
Disadvantages	Major surgery with a risk of complications Permanent stoma bag

#### What should I do with this information?

Thank you for taking the trouble to read this information. Please let your urologist (or specialist nurse) know if you wish to have a copy for your own records. If you wish, they can also arrange for a copy to be kept in your hospital notes.

## What sources were used to prepare this leaflet?

This leaflet uses information from consensus panels and other evidencebased sources including:

- the Department of Health (England);
- the Cochrane Collaboration; and
- the National Institute for Health and Care Excellence (NICE).

It also follows style guidelines from:

- the Royal National Institute for Blind People (RNIB);
- the Information Standard;
- the Patient Information Forum; and
- the Plain English Campaign.

#### Disclaimer

We have made every effort to give accurate information but there may still be errors or omissions in this leaflet. BAUS cannot accept responsibility for any loss from action taken (or not taken) as a result of this information.

#### PLEASE NOTE

The staff at BAUS are not medically trained, and are unable to answer questions about the information provided in this leaflet. If you do have any questions, you should contact your urologist, specialist nurse or GP.
